# Benefits to Citizen

## Advertisement Application

# Benefits to Government

Implementation of System Reduces Costs of Running a Government

With system, paperwork has been made so simple

By establishing centralized point of communication through system, government can achieve high operational efficiency.

The use of system helps make all functions of the organization transparent.

Reduction in time for processing and taking actions on work and reduce the pendency of work.

# Property Tax & GIS Integration | Overview

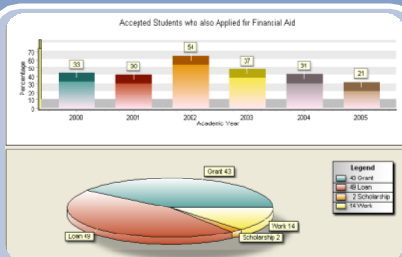

## Building Data Inventory

GIS integration can be used to link Property tax data with Building data inventory of the Municipal body. This inventory contains detailed data of each building stored separately for each floor first then within a floor, for each flat. The inventory is kept up-to-date with all changes happening to the property such as splitting, amalgamation, change of use.

## Land Use

GIS map is used to superimpose current building usage on top of proposed Development Plan (DP) to identify land use violations and enforce usage policies. This helps administration in identifying land use violations and enforcement of usage policies.

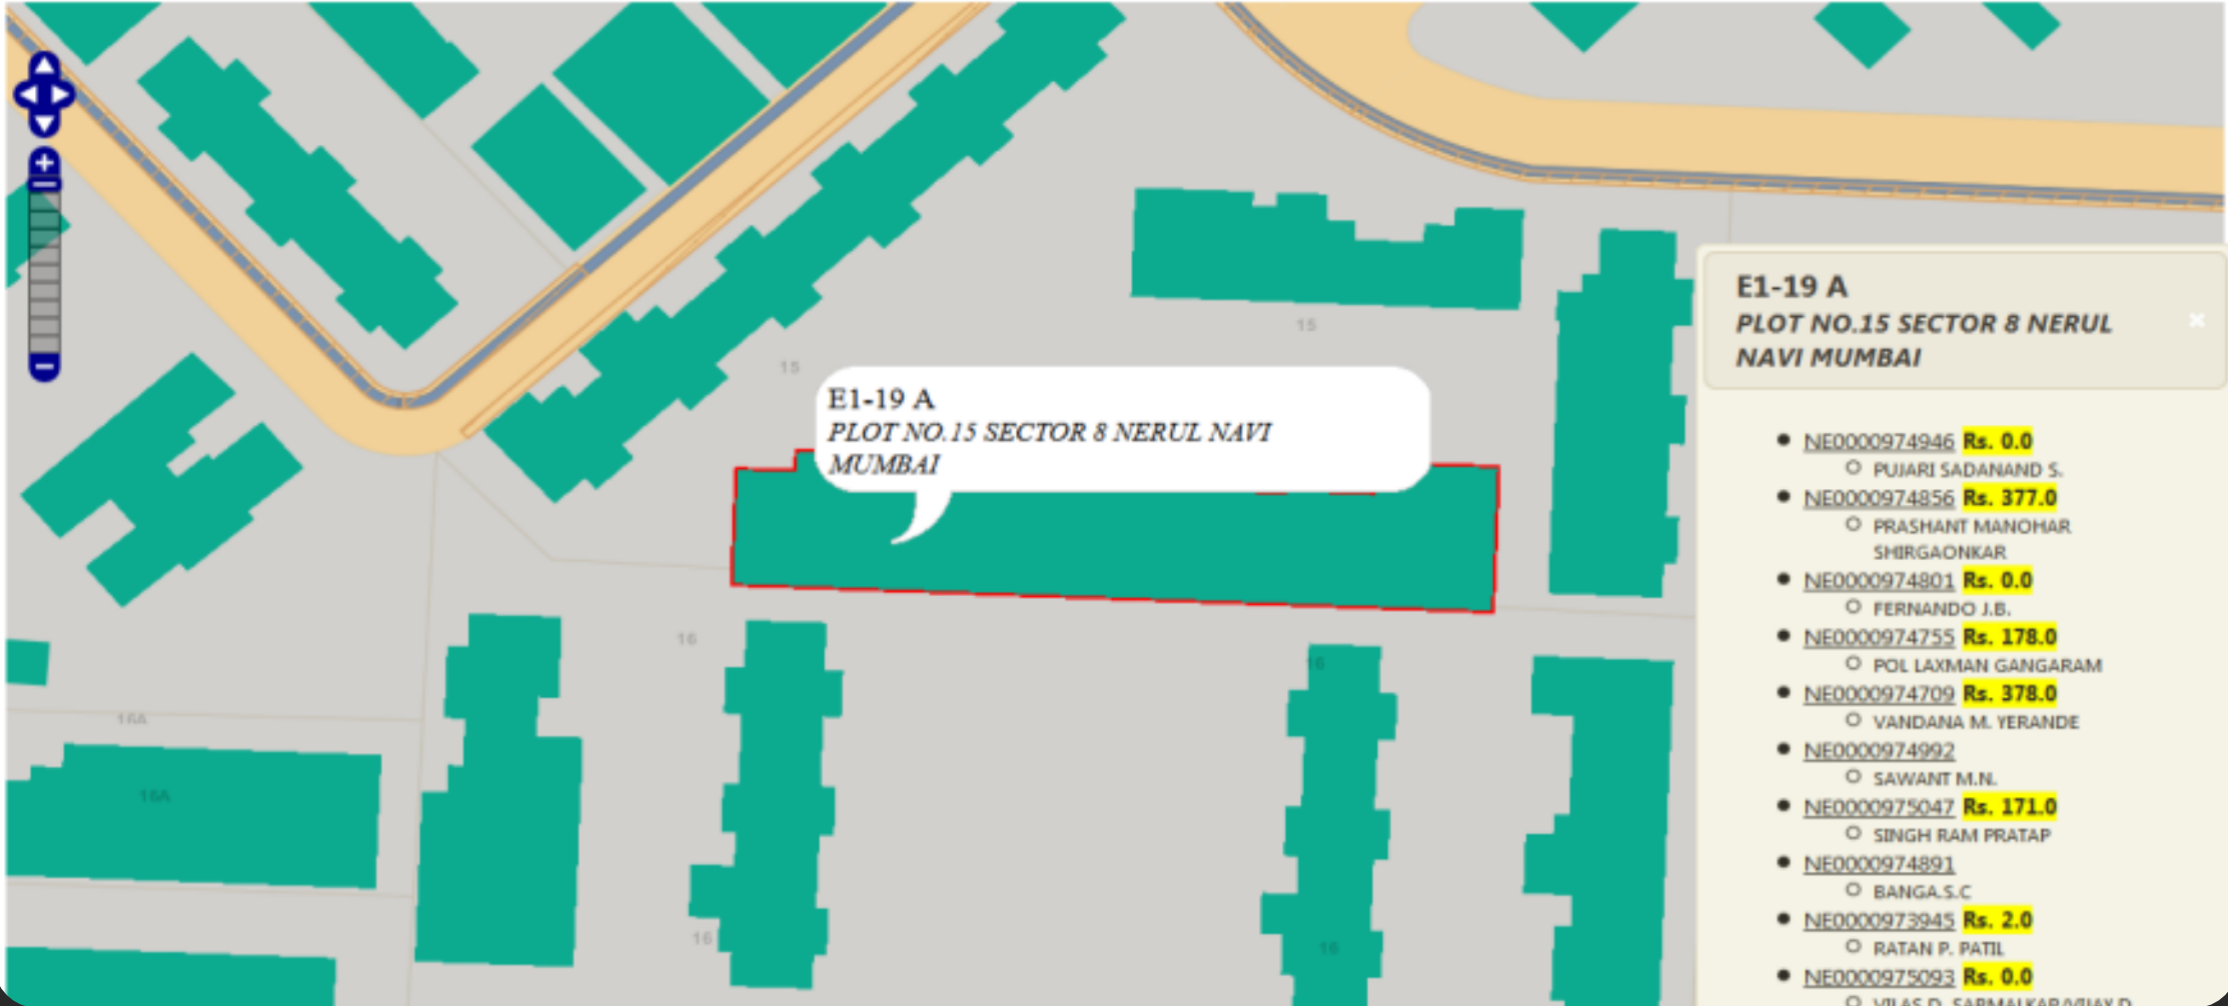

## Reports and Analytics

Billing and collection related reports are provided additional option to view data on map so that defaulters are immediately identified and ward-wise performance of recovery can be analysed.
